

Return to "Data Analyst Nanodegree" in the classroom

# Investigate a Dataset

REVIEW HISTORY

### Meets Specifications

Congrats, you made it :)

This is a neat, well formatted project. I enjoyed reading it

Keep up the good work

Have a great day,

Cheers :)

### **Code Functionality**

- ✓ All code is functional and produces no errors when run. The code given is sufficient to reproduce the results described.
- The project uses NumPy arrays and Pandas Series and DataFrames where appropriate rather than Python lists and dictionaries. Where possible, vectorized operations and built-in functions are used instead of loops.
- The code makes use of functions to avoid repetitive code. The code contains good comments and variable names, making it easy to read.

## **Quality of Analysis**

The project clearly states one or more questions, then addresses those questions in the rest of the analysis.

# **Data Wrangling Phase**

The project documents any changes that were made to clean the data, such as merging multiple files, handling missing values, etc.

# **Exploration Phase**

- The project investigates the stated question(s) from multiple angles. At least three variables are investigated using both single-variable (1d) and multiple-variable (2d) explorations.
- The project's visualizations are varied and show multiple comparisons and trends. Relevant statistics are computed throughout the analysis when an inference is made about the data.

At least two kinds of plots should be created as part of the explorations.

# **Conclusions Phase**

The results of the analysis are presented such that any limitations are clear. The analysis does not state or imply that one change causes another based solely on a correlation.

 ${\sf Good\ job\ suggesting\ enhancements\ to\ the\ dataset\ that\ also\ indicate\ existing\ limitation\ to\ your\ analysis:}$ 

Appointment time was not registered in the data, and that could be a very useful infomration to know which part of the day the patients are most likely to skip their appointments. As well, I wanted to have longer interval of time than 3 months. Longer period of time will give us an indication on how seasons and holidays may affect the appointment show-up status.

## Communication

Reasoning is provided for each analysis decision, plot, and statistical summary.

Visualizations made in the project depict the data in an appropriate manner that allows plots to be readily interpreted.
